

Product Description

WindProtect[™] plates are rigid, metal accessories specifically designed to protect vegetated roof components from wind damage. The WindProtect Plate is screwed to the edging corner pieces, effectively locking the sedum blankets in place. Made using one of the highest strength alloys of non-heat treated grades that also has a good resistance to salt water corrosion.

Required accessories:

- Edging strips
- Inside and outside corners

Technical Data

▪ Thickness (in)	0.063
▪ Tensile Strength (ksi)	33
▪ Yield Strength (ksi)	28
▪ Material	Aluminum ASTM B209 Alloy 5052H32
▪ Brinell Hardness	60
▪ Color	Mill Finish AA M10 Standard mill finish

Recommended Application

- After vegetation is installed, place WindProtect Plates[™] over corner edging.
- Press WindProtect Plate[™] tightly down over vegetation.
- While maintaining pressure over the vegetation, secure WindProtect Plate[™] to edging with screws through provided holes on the inside top lip of the plate.
- Repeat process over edging at all corners of the roof; inside and outside corners.
