

Product Description

The Flora Garden system accommodates a range of growing media depth starting at 150mm (6"). Greater depth allows a variety of plant species to thrive and ultimately create a green roof oasis with varied textures, heights and colours that serve to enhance a rooftop's aesthetics as well as promote biodiversity. Flora Garden's extensive plant list helps to create habitat and contributes to a green corridor for birds, pollinators, and insects. Plants may include a wide selection of native and non-native grasses, forbs, evergreens, and woody plants.

Plant list
